

COVID-19 in Lake County, Ohio: April 23, 2021

This report summarizes available data for total COVID-19 cases in Lake County, Ohio, including both laboratory confirmed and probable cases, based on cumulative data entered in the Ohio Disease Reporting System Data Extract as of 12:01 am Thursday prior to the date of issue. The level of detail provided has been determined appropriate to ensure the protection of sensitive individual health information. Some data are preliminary, and therefore subject to change.

Total Cases: 20,144

**Two-week Incidence Rate
per 100,000 population: 207**

Lab Confirmed Cases: 17,841

New COVID-19 Cases by Event Date*

Probable Cases: 2,303

Antibody Positive: 16

Antigen Positive: 2,148

Non- Antigen/Antibody: 139

Data Preliminary

*Event Date refers to the first date in a medical record associated with a given illness. For the vast majority of cases, the reported Event Date refers to the date of symptom onset (date on which the case first experienced COVID-19 symptoms). For the cases for which this date is unknown, the date presented refers to the date a specimen was collected for COVID-19 testing. Due to lags in testing and reporting, new cases may appear for dates several weeks in the past. A seven (7) day rolling average is included to assist in visualizing the trend, and the most recent value is indicated on the far right side of the graph.

Lake County Two-Week COVID-19 Incidence Rates

The graph below summarizes the two-week incidence rates for COVID-19 (number of new cases of COVID-19 per 100,000 Lake County Residents) ending on the date indicated. This metric informs Indicator 1, new cases per capita, for the [Ohio Public Health Advisory Alert System](#), adopted July 30, 2020. The markers indicating each week's rate are colored to reflect Lake County's Alert designation for that week (see link for details). Note, alert level is determined using seven (7) indicators, not only incidence. A two-week rate below 50 per 100,000 population for all of Ohio will be the threshold for lifting all statewide COVID-19 health restrictions.

Lake County Two-Week Incidence Rate (Cases per 100,000 population)

Exposure Geography

Variants Detected in Lake County:

B.1.1.7
B.1.429

Exposure Source

States of Exposure:

Ohio	Minnesota
Alabama	Mississippi
Arizona	North Carolina
California	Nevada
Colorado	New Jersey
Florida	New York
Georgia	Pennsylvania
Illinois	Rhode Island
Indiana	South Carolina
Kentucky	Tennessee
Louisiana	Texas
Maryland	Virginia
Massachusetts	Wisconsin
Michigan	West Virginia
Minnesota	D.C.

Countries of Exposure:

United States
China
Dominican Republic
Jamaica
Mexico
United Arab Emirates

The following graph depicts the number of new cases among Lake County residents by week, classified by the date reported to LCGHD and thus added to the cumulative count (positive test or diagnosis according to CDC case definitions). For the purposes of this report, weeks run from Sunday through Saturday. Data reported for each week reflect the number of cases reported from the previous Sunday, ending on the Saturday date shown. The date reported is used because new cases are regularly reported with symptom onset dates several weeks or more in the past due to lags in testing, reporting, and case investigation. Dates for the statewide orders, as well as major holiday observances, are added for reference.

New Cases of COVID-19 Reported by Week
Among Lake County Residents

The following graph depicts the number of new cases among Lake County residents by week, classified by the event date, which is the first known date associated with a case. For most cases, this is the date of symptom onset (date on which the confirmed or probable case first experienced symptoms), but may reflect the date of test specimen collection in cases where onset date is unknown due to a case being asymptomatic, or delays in the verification of the onset date during case investigation. For the purpose of this report, weeks run from Sunday through Saturday. Data reported for each week reflects the number of cases from the previous Sunday ending on the Saturday date shown. Dates for statewide orders, vaccine availability, as well as major holiday observances, are added for reference.

COVID-19 Deaths (Cumulative)

To date, 410 deaths have been reported among COVID-19 cases who were Lake County residents. For 29 deaths, cause of death was not directly attributed to COVID-19, or has yet to be determined. The subset reported below has been determined to meet the vital statistics criteria outlined in the [Ohio Infectious Disease Control Manual](#) as deaths from COVID-19. Those who do not currently meet the criteria, commonly referred to as “deaths with COVID-19,” are excluded from reported statistics. Note, these statistics are compiled from the Ohio Disease Reporting System, and as of March 2, 2021, may no longer match death numbers reported on the ODH Dashboard, which now uses data exclusively from the Electronic Death Reporting System for COVID-19 deaths.

COVID-19 Measures by Month

For data presented below, cases are classified by Event Date (first sequential date associated with a case - see detailed definition on page 5). Hospitalizations and ICU admissions are classified by facility admit date, and deaths are classified by date of death.

COVID-19 Cases by Month

COVID-19 Hospitalizations by Month

COVID-19 ICU Admissions by Month

Deaths from COVID-19 by Month

At a Glance

Reported to LCGHD Since Last Data Report Release (classified by date reported)*

Measure	4/15	4/22	Change
Total Reported COVID-19 Cases (Cumulative)	19,884	20,144	+260
