# Influenza Surveillance Report in Lake County, Ohio: January 8- January 14, 2023 MMWR Week 2

*Influenza (flu)* is a contagious respiratory illness caused by Influenza viruses. It can cause mild to severe illness with serious outcomes like hospitalization or death. Susceptible individuals can be young children, older adults and people who have underlying serious health issues. The following report displays information about the hospitalizations due to influenza and emergency room (ER) and Urgent Care (UC) visits for *influenza-like illness (ILI) with fever* by Lake County residents for the current flu season, 2022-2023. The report illustrates the weekly flu activity including the reported hospitalizations for seasonal flu as reported in the Ohio Disease Reporting System (ODRS) and those with fever and ILI reporting to ERs and UCs from Epi Center, Ohio's syndromic surveillance system <a href="https://www.health-monitoring.com">https://www.health-monitoring.com</a>. Public Health surveillance data indicate *low-medium flu activity* in Lake County, Ohio during the week of the current flu season <a href="https://www.flustar.com/forecast/current/cold/44060">https://www.flustar.com/forecast/current/cold/44060</a>. The data are reported.

#### Data Sources:

1. Emergency Department Visits (Epi Center): Epi Center collects emergency department chief complaint data from hospitals and urgent care facilities visited by Lake County residents and classifies them into symptom and syndrome categories. Chief complaints regarding fever, ILI and other symptoms commonly detected during flu season are analyzed.

2. Influenza- Associated Hospitalizations (ODRS): For seasonal flu, influenza-associated hospitalizations and pediatric deaths are reported by LCGHD and hospitals using ODRS. Individual cases of Influenza are only reported if there is a novel strain detected (similar to how COVID-19 was a novel coronavirus). Hospitalizations are considered to be the indicator for the severity of illness during particular flu season.

#### Influenza in Lake County, Ohio - 2023 MMWR Week 2 (Continued)

Page 2

The following graph depicts the number of Influenza Hospitalizations for the 2022-2023 flu season among Lake County residents during Morbidity and Mortality Weekly Report (MMWR) Week 2. MMWR weeks align with the epidemiological year for the National Notifiable Diseases Surveillance System (NNDSS) disease reports from local and state health departments. The MMWR is published weekly by the Centers for Disease Control and Prevention (CDC) for the purpose of timely publication of reliable, accurate, objective, and useful public health information and recommendations. Values for MMWR week range from 1 to 53, and roughly align with weeks of the calendar year. Most years consist of 52 weeks, and weeks run from Sunday through Saturday.

Among Lake County residents, there have been 4 hospitalizations for influenza recorded during MMWR week 2. To date, hospitalizations have occurred among all age groups, with the highest proportion being among ages 65+.
